

## Description

### Food for special medical purposes.

GA gel™ is an unflavoured powdered lysine free, low tryptophan protein substitute containing essential and non-essential amino acids, carbohydrate, vitamins, minerals and trace elements.

## Indications

GA gel is for the dietary management of Glutaric Aciduria type 1 (GA1) from 6 months to 10 years of age.

## Dosage and Administration

To be determined by the clinician or dietitian and is dependent on the age, body weight and medical condition of the patient.

The product can be used individually or interchanged to meet individual protein requirements.

1. The daily protein substitute requirement is given as GA gel.
2. Additional protein is provided from exchanges of natural protein, to provide restricted amino acids in controlled amounts, which is essential for growth and development.
3. Foods high in carbohydrate and fat, but low in protein, should be provided to supply the remainder of the energy.

GA gel (24g) = 10g PE

## Preparation Guidelines

GA gel can be either taken as a gel or a low volume drink.

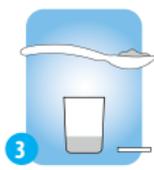

### For gel:

1 Empty the contents of the sachet into a beaker.

2 Add approximately 30ml of cold water. Secure the lid and shake well for 10 seconds.

3 Leave to stand for 2 minutes, allowing a smooth gel to form. Consume with a spoon.

### For a low volume drink:

1 Empty the contents of the sachet into a beaker.

2 Add approximately 80ml (half way up the beaker) of cold water. Secure the lid and shake well for 10 seconds.

3 Drink immediately.

Water or permitted drinks should be taken after GA gel.

## IMPORTANT NOTICE

Must only be given to children with proven GA1 under strict medical supervision.

Suitable from 6 months to 10 years of age.

Diet must be supplemented with natural protein, water and other nutrients in prescribed quantities to supply lysine and tryptophan, fluid and general requirements.

Not for use as a sole source of nutrition.

For enteral use only.
