

FOR HEALTHCARE PROFESSIONAL USE ONLY

Compleat[®] paediatric

The first and only tube feed in the UK to contain food derived ingredients*

IMPORTANT NOTICE

When selecting on the clinical system, use 'Compleat[®] paediatric (SimpLink[®])' for the 250ml format and 'Compleat[®] paediatric' for the 500ml format.

The 250ml bottle of Compleat[®] paediatric comes with an ENFit compatible SimpLink[®] connection on the cap. This is different to the 500ml SmartFlex[™] bottle, and they cannot be used interchangeably.

The 250ml SimpLink[®] cap connects directly to the gastrostomy tube for bolus feeds, whereas the 500ml cannot. If needed, the 250ml format can also be connected to a pump if a universal adaptor or screw-cap giving set is used.

Compleat[®] paediatric is an enteral tube feed for the dietary management of patients with or at risk of malnutrition, and is suitable as a sole source of nutrition.

Product	Presentation	PIP Code	Unit Price	Case Size	Case Price	Minimum Prescribing Unit

Compleat[®] paediatric is a Food for Special Medical Purposes, to be used under medical supervision. *Accurate at time of release, July 2022.
13.8% of Compleat[®] paediatric is from rehydrated chicken, rehydrated vegetables (peas and green beans), peach puree and orange juice from concentrate. Compleat[®] paediatric was formerly known as Isosource[®] Junior Mix. The product name changed in Dec 21, however the formula stayed the same.
